

•••Experience the mind's body connection through movement with Carol Welch, Educational Director

BioSomatic Movement Classes

The Missing Link in Fitness

Educating the body by non-strenuous movement to resolve stiffness, soreness, and restricted range of movement.

These workshops are for everyone interested in acquiring knowledge to self-direct their health.

Releasing habitual tensions in spine and joints.

- Synovial Joints the most prevalent type of joints in the body. Found mostly in the limbs and along the back of the spine.
- This somatic way of moving spinning, rolling and gliding contribute to the health of these joints.
- When joints become stiff and painful this pain may be mistaken for arthritic pain.
- When in fact movement could alleviate it.

Biosomatics is a step towards taking our healing back into our hands. It is an empowering approach to movement utilizing a composite of techniques to retrain the messages sent from the brain to the body. Biosomatics is a means to a more direct self-knowledge of our autonomy in refining how we move, discerning what will work best and reacquainting us with our inherent capacity to remain agile.

This is a process of reeducating adult neuro-motor functioning resulting in a means to self-adjust tension, change postural patterns and help us gain freedom from the unconscious habits of how we use ourselves.

2022 SCHEDULE TUESDAYS SERIES 1 - January 4, 11, 18, 25 3:30 p.m. to 4:30 p.m. SERIES 2 - April 5, 12, 19, 26
